

WASTE RESOURCES

Curb your impact by challenging yourself to reduce your waste!

We partner with our customers and communities to manage and reduce waste from collection to disposal while recovering valuable resources and creating clean, renewable energy. Today, as natural resources become scarcer and manufacturing costs rise, recycling is more important than ever. Waste Management is working to find the most efficient and forward-thinking approach to handling waste. With your help, we can work to reduce our environmental impact and manage materials more effectively.
